

SARAVANAN R

AI ENGINEER

SUMMARY

HTML, CSS, JavaScript, and frameworks such as React and Bootstrap. Proven ability to collaborate effectively with development teams to implement front-end features and optimise website performance. Experienced in developing cross-platform mobile applications with Flutter and Dart, enhancing UI/UX and integrating backend systems. Proficient in Python, AI engineering, Node.js, SQL

EDUCATION

05/2027

Mount Zion College of Engineering and Technology Pudukkottai-Bachelor of Technology Artificial Intelligence and Data Science

SKILLS

Python developer	
Flutter	
Frontend developer	
JavaScript	
AI engineer	
UI/UX developer	
Full Stack Developer	
Node.js	

LANGUAGE

- English
- Tamil

EXPERIENCE

Web developer

2025 - present

NovoTech

- Assisted in developing and maintaining responsive web applications using HTML, CSS, JavaScript, and frameworks like React/Bootstrap. Collaborated with the development team to implement front-end features and fix bugs. Worked with APIs and optimized website performance for better user experience.

AI developer

2025- 2026

ZF group of institute - singapore

- I have developed a language platform named UPI Language, which enables direct hardware execution of mathematical operations. It is designed to support multiple regional languages and is being developed as part of IIT research.

PROJECTS

AquaGuard - Smart Water Tank Monitoring System

Mountzion college of Engineering and Technology

- Designed an IoT-based system using NodeMCU to monitor water levels across 7 tanks. Implemented relay-based motor control for automated water flow management. Built a Node.js server dashboard to display real-time tank data, motor status, and fault alerts.

Sim-Vital

Mountzion college of Engineering and Technology

- The system uses an ESP32 microcontroller to integrate sensors with a CPR dummy for training. It measures compression pressure, depth, airflow, and CO₂ levels during CPR practice. A multi-parameter monitor interface displays live graphs and values, simulating a real ICU monitor.

AC Monitor

Mountzion college of Engineering and Technology

- The AC Monitor Kit uses a NodeMCU microcontroller with a ZPEM sensor to measure power usage of an air conditioner. A relay module is connected to the AC, allowing remote switching and automatic control. The collected data is sent to a server dashboard for real-time monitoring of current, voltage, and energy.
